QuantiFERON[®]-TB Gold (QFT[®])

Dear Physicians & Staff,

Recently, you may have heard about a new technology for Tuberculosis (TB) screening, known as an interferon-gamma (γ) release assay (IGRA). This new IGRA technology offers a modern alternative to the tuberculin skin test (TST), and has seen growing support in guidelines and recommendations from reputable national agencies, such as the Centers for Disease Control and Prevention (CDC), American College of Rheumatology (ACR) and Infectious Disease Society of America (IDSA).

With the introduction of these assays, **Enzo Clinical Labs** remains firmly committed to offering the FDA-approved QuantiFERON[®]-TB Gold (QFT[®]) test to you and your patients. We believe the QFT test offers superior performance and added convenience at a competitive price, as evidenced by:

- **Improved accuracy**
- **Only requires a single visit**
- **Unaffected by BCG vaccine, resulting in fewer false positives**
- **Outperforms the TST in immune suppressed patients**

It is our goal at **Enzo Clinical Labs** to provide you, our clients, with the most trusted and proven diagnostic tools. We believe that QFT is the most published and clinically proven test available for identifying your patients' risk of TB.

We welcome the opportunity to discuss this test with you, and how you can gain access to it for your patients. For immediate assistance or ordering information, please call your Enzo Sales / Service Representative or our Client Services Department at 800-371-5227.

Enzo Clinical Labs appreciates the continued opportunity to serve you and your patients.

Thank you,

Enzo Clinical Labs, Inc.
